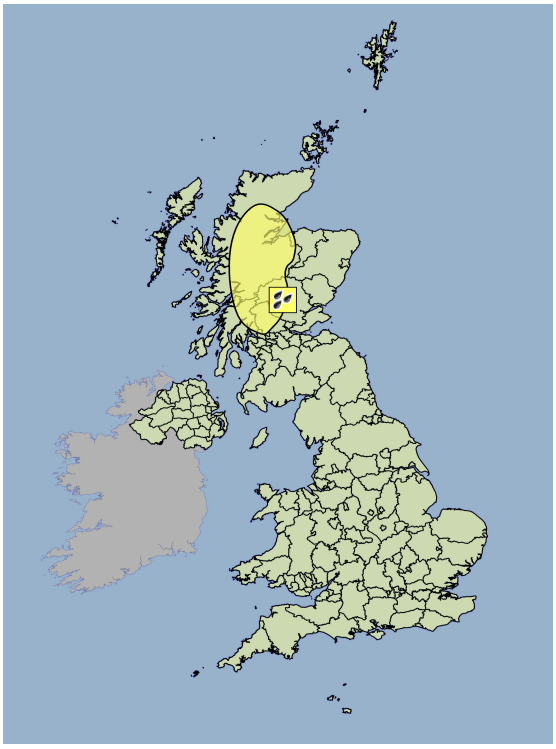
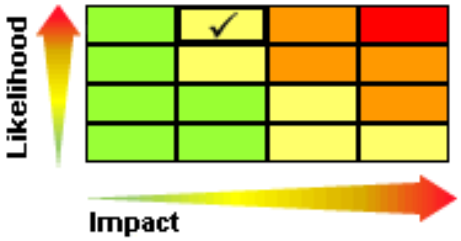
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system is bringing an area of rain and hill snow eastwards across Scotland. This will be followed by further persistent heavy rain for areas exposed to the west during Sunday night, where 25-50 mm of rain is expected to fall (much smaller amounts to the east of high ground). The combination of further heavy rainfall and also melting of lying snow over the hills will increase the risk of localised flooding as rivers respond during Monday.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **21:00 on Sun, 11th Jan 2015** until **07:00 on Mon, 12th Jan 2015**

Persistent heavy rain will affect western Scotland through Sunday night. Already saturated catchments combined with melting snow will lead to some localised flooding.

The public should be aware of the risk of disruption due to flooding.

This is an update to the Alert issued on Saturday,
